

MY-portfolio-website

Portfolio Website Overview (Points 1–8)

1. **Responsive Navigation Bar** - Built a fixed top navigation bar with links to **Home, About, Resume, Projects, and Contact**.
 - **Technologies:** HTML, CSS (flexbox), position: fixed for always visible.
2. **Home Section with Profile Image** - Centered **profile picture** with your name below it.
 - **Technologies:** HTML `<img>`, CSS border-radius, box-shadow for professional styling.
3. **About Me Section** - Lists academic background, skills, and strengths in **bullet points**, highlighting your technical and soft skills.
 - **Technologies:** HTML `<ul>` and `<li>`, CSS for layout and spacing.
4. **Resume Section** - Includes a **download/view resume button** linking to your PDF file.
 - **Technologies:** HTML `<a>` with `target="_blank"`, CSS button styling.
5. **Projects Section Layout** - Grid layout displaying **four projects** in two columns, centered on the page.

- **Technologies:** CSS Grid for alignment, responsive design.
 - 6. **Project Box Design** – Each project has a **box with title and placeholder image**, hover effect for interactivity.
 - **Technologies:** CSS transitions (transform: scale), background hover effects.
 - 7. **Contact Section** – Shows **email, phone number, LinkedIn, GitHub** for direct connection.
 - **Technologies:** HTML `<p>` and `<a>`, CSS hover effects for links.
 - 8. **Footer** – Simple footer with copyright information.
 - **Technologies:** HTML & CSS styling for background color and alignment.
-

Project Details (Points 9–16)

- 9. **Project 1: Calculator**
 - **Purpose:** Demonstrates **basic programming logic, arithmetic operations, and DOM manipulation**.
 - **Technologies:** HTML for layout, CSS for styling buttons and input, JS for calculation logic.
 - **Skills Showcased:** Problem-solving, logic implementation, JS fundamentals.
- 10. **Project 2: Quiz Generator**

- **Purpose:** Interactive quiz platform where users can select answers and get scored.
- **Technologies:** HTML forms, CSS styling for quiz layout, JS for dynamic question loading, answer checking, and score calculation.
- **Skills Showcased:** Conditional logic, array manipulation, event handling.

11. Project 3: To-Do List App

- **Purpose:** Users can add, delete, and set reminders for tasks.
- **Technologies:** HTML for input and list display, CSS for centered layout and styling, JS for **DOM** manipulation and timer-based reminders.
- **Skills Showcased:** Frontend interactivity, DOM API, data manipulation.

12. Project 4: Weather App

- **Purpose:** Fetches and displays **real-time weather data** for any city worldwide, with dynamic backgrounds.
- **Technologies:** HTML input and display, CSS for centered box and dynamic background, JS with **fetch API** for **OpenWeatherMap API**, dynamic DOM updates.
- **Skills Showcased:** API integration, asynchronous JS (fetch), conditional styling, responsive UI.

13. Weather App Enhancement:

- **Temperature and Weather Description** dynamically displayed.
- **Dynamic Backgrounds** change based on weather conditions (clear, clouds, rain, snow, thunderstorm).
- **Skills Showcased:** Conditional logic, CSS transitions, real-world API usage.

14. **Weather App Icons & Emojis:**

- Uses **OpenWeatherMap** icons for main weather condition.
- Added **emojis** for city, temperature, weather, humidity, and wind speed for **better visualization**.
- **Skills Showcased:** UI enhancement, user-friendly display.

15. **To-Do List Timer Feature:**

- Set a **reminder timer for tasks**, alerts user at specified time.
- **Skills Showcased:** JavaScript timing functions (setTimeout, setInterval), DOM updates.

16. **Portfolio-ready Design:**

- All four projects are in **individual folders** with their **own HTML, CSS, and JS**.
- Clicking project boxes **opens respective projects** in a new tab.
- **Skills Showcased:** Project organization, modular coding, clean UX.

Technical Enhancements & Resume Strength Points (Points 17-20)

17. Center-aligned Design:

- All sections, boxes, and content are **perfectly centered**, ensuring a clean, professional portfolio look.
- **Skills Showcased:** CSS flexbox, CSS Grid, responsive design.

18. Interactive UI:

- Hover effects, scaling, dynamic backgrounds, button feedback enhance **interactivity**.
- **Skills Showcased:** Frontend design, user experience, CSS animations.

19. Full Stack Skill Representation:

- Even though the projects are frontend-heavy, **integration with APIs (Weather App)** demonstrates **real-world problem-solving** and **data fetching skills**.

20. Portfolio as a Resume Highlight:

- Website showcases **personal branding**, technical skills (C, Python, JS, HTML, CSS), problem-solving, and project experience.

- Projects reflect both **logic/programming abilities** (Calculator, Quiz) and **frontend/UI expertise** (To-Do List, Weather App).

Resume-friendly

To showcase my strengths as a Computer Science student, I have developed a set of mini projects demonstrating both my **programming logic and frontend development skills**. These projects highlight my proficiency in **C, Python, HTML, CSS, and JavaScript**, as well as my ability to **apply concepts in practical, interactive applications**. Each project reflects a different aspect of my skill set: from problem-solving and logical thinking in the **Calculator and Quiz Generator**, to **DOM manipulation and UI design** in the **To-Do List**, and **API integration with real-time data handling** in the **Weather App**. These projects are carefully designed to be **portfolio-ready, visually appealing, and interactive**, giving a clear picture of my technical capabilities. Overall, this collection demonstrates my ability to combine **logic, design, and practical implementation** in compact, meaningful projects.
